

Technical Information

■ hebro[®]cid I-5

Highly concentrated fungicide, especially for use in cooling lubricant emulsions and grinding solutions

hebro[®]cid I-5 is a highly effective product with an especially good effect on a multitude of fungi. Acts also there where conventional fungicides fail permanently.

hebro[®]cid I-5 is all-purpose for all water mixed metal working liquids, for mineral oil free as well as mineral oil containing products.

hebro[®]cid I-5 is especially suitable for plants which are heavily used with fungi. Because of the very wide application spectrum a durable combating of heavy, against other fungicides resistant cultures of fungi can be effected.

hebro[®]cid I-5 offers the following advantages:

- | | |
|---------------------------|--|
| Economic | a fast and problem-free fungicidal effect reduces downtimes and labour costs |
| Cost-effective | high economy through low required quantities. Longer service life of water-bearing systems. Low maintenance intervals. |
| Operational safety | acts immediately with an impulsive dosage, thereby no durable contact with aggressive cultures of fungi. |

Application:

First of all remove the existing culture of fungi manually. Afterwards add hebro[®]cid I-5 slowly at a turbulent position. Please take care that also the places, where fungi are located, are washed over with the treated emulsion after carried out through-mixing.

Dosage: 1 - 2 litres/m³ (0.1 - 0.2 %)

Technical data:

- Form: liquid
Colour: colourless, yellowish
Density: 0.96 kg/l
Licence number: N-39474 (EU-biocide-directive 98/8 EG)

Note: Please use biocides securely. Before use always read marking and product information
